Cambridge Economic Policy Review

April 1979 No 5

Gower Press

Acknowledgements

This *Review* is the latest in a series of annual reviews on policy questions which began in 1971. The Cambridge Economic Policy Group, not all of whom necessarily contributed to this particular document, comprises:

Paul Atkinson	Graham Gudgin
Dipak Basu	Barry Moore
Kenneth Coutts	John Rhodes
Francis Cripps	Roger Tarling
Martin Fetherston	Terry Ward
Wynne Godley	Frank Wilkinson

In addition, Richard Bacon, of the Department of Land Economy, University of Cambridge, has worked closely with the Group again this year. The following chapters are not personally attributed, but I must report that Francis Cripps was the architect, construction engineer and foreman for our new model of the world trading system.

I should like to thank Joyce Leverett for taking the main burden of typing our various drafts, ably helped by Shani Dawson, Anne Mason, Sharon Metcalfe, Sue Moore, Kath Wilson and Teresa Gurner. We are also grateful to Bobbie Coe, Lynda Symonds and Diana Day for all their computing work and to the University Computing Service for the excellent facilities with which it provides us. Jo Bradley undertook the liaison between authors and publishers.

We have again been helped on North Sea projections by Colin Robinson and Chris Rowland of the University of Surrey and Jon Morgan of the British National Oil Corporation.

The Economic Policy Group has received continuing financial support from the Social Science Research Council and Richard Bacon has been assisted by a Milk Marketing Board scholarship. None of these organisations is in any way responsible for the conclusions of our research.

Wynne Godley
